2D Polygons

Across

- **3.** A stop sign is one of these.
- **5.** A quadrilateral that has two pairs of congruent sides and no right angles (its on your purple bucket).
- **8.** A quadrilateral that has two pairs of congruent sides and four right angles.
- **10.** A quadrilateral that sometimes looks like a kite or a diamond.

- **13.** A polygon with 10 vertices.
- **14.** A polygon that has four sides.
- **15.** A seven sided polygon.
- **16.** This is a perfect corner.
- **17.** A polygon with nine sides.

Down

- 1. A polygon that has 5 sides.
- **2.** This shape is round and closed, but it is not a polygon.

- **4.** This word means same size and same shape.
- **6.** A polygon that has three angles.
- **7.** A 2-D shape with straight sides that are joined together.
- **9.** A polygon that has four congruent sides and four right angles.
- 11. A shape with 6 vertices.
- **12.** A quadrilateral with one pair of congruent sides.
