# 3.1 and 3.2

- |   |                                |
|---|--------------------------------|
| 1. coplanar lines that do not intersect   | A. consecutive interior angles |
| 2. lines that do not intersect and are not coplanar   | B. interior angles             |
| 3. planes that do not intersect   | C. corresponding angles        |
| 4. A line that intersects two or more coplanar lines at two different point                             | D. alternate exterior angles   |
| 5. interior angles that lie on the same side of a transversal   | E. parallel planes             |
| 6. nonadjacent interior angles that lie on opposite sides of a transversal                              | F. parallel lines              |
| 7. nonadjacent exterior angles that lie on opposite sides of a transversal                              | G. alternate interior angles   |
| 8. lie between the two lines that are intersected by the transversal                                    | H. exterior angle              |
| 9. lie outside the two lines that are intersected by the transversal                                    | I. transversal                 |
| 10. angles that occupy the same relative positions at each intersection of the line and the transversal | J. skew lines                  |
