# AP Psychology - Learning and Sleep

## Across

2. What is a pair of cell clusters in the hypothalamus that control the circadian rhythm?
3. What is the decrease in the CR when the UCS is no longer presented with the CS?
5. What is an unlearned, naturally occurring response?
10. What is the periodic natural loss of consciousness?
11. What is a large, slow brain wave associated with deep sleep?
13. What is a reoccurring problem in falling or staying asleep?
14. What is rewarding successive approximations of a target behavior?

15. What is a reoccurring sleep stage during which vivid dreams commonly occur?

16. What is behavior that are followed by consequences that are satisfying to the organism are more likely to be repeated and behaviors that are followed by an unpleasant consequence are less likely to be repeated?

17. What is any event/situation that evokes a response?

18. What is a stimulus that naturally triggers a response?

19. What is a learned response to a previously neutral stimulus?

## Down

1. What is false sensory experiences?

4. What is the biological clock; regular bodily rhythms that occur in a 24 hour cycle?

6. What is the acquisition of mental information through observing others?

7. What is any event/situation that strengthens the behavior that it follows?

8. What is a process of acquiring new and relatively new information or behaviors?

9. What is the relatively slow brain wave of a relaxed, awake state?

12. What does not trigger a response at first, but when paired with an UCS, it can affectively stimulate learning?
