

Agility 2017

Across

4. F5 REST API Framework
5. The algorithm use to disguise data or code
7. The best way to secure data in transit
11. "_____ IT" people who provision Apps & Services without authorisation
14. A combination of multiple Clouds or Consumption models
15. An arbitrary number that may only be used once
16. How unique am I? can my device be distinguished from others?
29. A mechanism whereby a browser uses a raw data channel to communicate with a server
31. How to get a non-routable protocol over a routed network
32. hackers newest minions are what type of device
33. The key you want everyone to have
36. Moving multiple Point solutions on to F5 Application Services Fabric
42. The collaboration of programmers and IT administrators
43. Maximise security strength while minimising key length
44. The most destructive botnet created to date
45. Market leading Cloud-based Application Services Platform
46. A revolutionary new purpose built security appliance "DDoS hybrid _____"

Down

1. Software used to disrupt a computer and/or gather sensitive data
2. Leverage machine learning and Data analysis for a new type of DoS mitigation
3. A fundamental principle of security to be able to see all your application traffic
6. How to protect past sessions against future compromises of keys
8. "App _____" used to dramatically simplify the deliver of services to public cloud apps
9. Journalist recently hit with record DDoS
10. American in exile in Russia
12. An network built on top of another network
13. A secure Key exchange methodology created by Ralph Merkle
17. How Websafe makes data unintelligible for the fraudsters
18. Best known form of digital currency
19. The key management tool on the journey to the Private cloud
20. F5 Developer community
21. ASM's automagical system to ensure only human web access "_____ Bot Defence"
22. The worlds first search engine for internet-connect devices
23. The layer of the OSI model that hackers love to exploit

24. Unique performance flexibility in the new iSeries appliances
25. An attack designed to disrupt the availability of systems or services
26. Used to speed up deployments and streamline operations
27. What film inspired the naming of F5?
28. "_____ authentication" allows a second level of access through APM
30. The worlds most programmable cloud ready ADC
34. The key you don't want anyone to have
35. Protects LDNS servers from Cach poisoning and MITM attacks
37. Don't get stung by their App Sec top 10
38. F5's event driven scripting language
39. This very conference
40. F5's all new purpose built security appliances
41. "_____ engineering" exploits layer 8
