## All About Angles

## Across

- 4. A measurement
- 6. Same endpoint and extend
- 7. Line with an endpoint that extends infinitely
- **9.** Dimensional with straight sides
- 10. Less than 90 degrees
- 14. Measure of a space inside a solid figures
- **16.** A point on a line segment that divides into equal parts
- 17. Point where two lines meet or cross
- **20.** A flat surface made up of points that extends infinitely in all direction 8. Three-dimensional
- 24. More than 90 degrees

- **26.** Interesting lines that are at right angle
- 27. A point where two or more line segments meet
- 28. A line that splits on angle into two equal angles
- 30. Pair Of non-adjacent angles **Down**
- 1. A equiangular and equilateral
- 2. Expresses the extent of two-dimensional figures
- 3. Angle formed outside parallel lines
- **5.** Connects two points
- 11. Exactly 90 degrees

- 12. The surface of a solid object stand on
- 13. Two lines that meet at a polygon vertex
- **15.** An Octagon
- 18. Same shape and size
- 19. Two points is the length of a straight line segment
- **21.** Formed when two lines intersect
- 22. Angle formed between parallel lines
- 23. A location
- 25. Two rays that share the same endpoints
- **29.** Line segment on boundary
