# Anatomical Terms

## Across

- 6. moving a body part backward
- 8. turning the sole of the foot outward
- 10. moving a body part forward
- 14. movement of limb towards the body
- 16. closer to the midline of the body
- 17. plane that divides body into upper and lower halves
- 20. toward the front
- 21. injury that occurs to a ligament
- 22. toward the head
- 23. tissue that connects bone to another bone
- 24. movement in which a bone turns on an axis
- 25. movement that increases angle between 2 bones

- 29. injury that occurs to a tendon or a muscle
- 30. pointing toes upward
- 31. plane that divides body into left and right halves
- 32. injury that occurs from slow, gradual onset
- 33. movement of a limb away from the body
- 34. turning the palm of the hand downward

## Down

- 1. farther from the midline of the body
- 2. movement in which a limb moves in a circular path
- 3. moving a body part upward
- 4. tissue that connects muscle to bone
- 5. turning the sole of the foot inward

- 7. injury that occurs from a direct blow
- 9. injury that occurs from a single traumatic event
- 11. away from the head
- 12. moving a body part downward
- 13. pointing toes downward
- 15. farther from a reference point
- 18. movement that decreases angle between 2 bones
- 19. plane that divides body into front and back halves
- 26. turning the palm of the hand upward
- 27. toward the back
- 28. nearest to a reference point
