# Anatomy Ch. 1 and 2 Vocab Part 2

## Across

2. Organic molecule that includes DNA and RNA

6. Towards the tail

7. Bond made by complete transfer of electrons

14. Ionic compound that dissociates into charged particles and dissolves in water

15. A nucleic acid that's in all living things and single stranded

18. The chemical reactions that occur in the body

19. A steroid made by the liver found in animal fats and body tissue

21. Having a uniform tension

22. Fats, cholesterol

23. Cellular energy

25. Determines how to react to a stimuli

## Down

1. Negatively charged subatomic particle

3. When you combine two or more things to make a product

4. An uncharged particle

5. Pressure from the weight of the atmosphere

8. Nucleic acid found in all living cells

9. Moving substances throughout the body

10. Made of two or more elements and chemically connected

11. Pertaining to the skull

12. The smallest part of an element

13. An organ, gland, or muscle that can be activated by nerve endings

16. Pertaining to the back

17. A bond involving sharing electrons between atoms

20. Farthest point from an attached limb

24. Closer to the inside of the body
