

Anatomy and Physiology Chapter 1 Vocab

Across

- 1. Cavity that encloses the teeth and tongue.
- 3. Imaginary anatomical dividing lines that are useful in separating body structures.
- 7. Region located just below the sternum.
- 9. Means away or toward the side of the body.
- 11. This refers to direction and means tail end.
- 12. Mean away from the point of attachment or farthest from the trunk.
- 13. Region also known as pubic area.

- 15. This is a metabolic process that involves the building up of complex materials from simpler ones (food and oxygen) and requires energy.
- 16. Means back or in back off, also known as dorsal.
- 17. Means toward the midline or median plane of the body.
- 18. Vertical cut that divides the body into anterior and posterior portions.
- 19. The study of tissues and organs that make up the entire body of an organism,

Down

- 2. Divides the body into right and left parts.

- 4. Bisects the body into right and left halves.
- 5. This refers to direction and means skull or head end of the body.
- 6. This is a metabolic process that involves the breaking down and changing of complex substances into simpler ones, with a release of energy and carbon dioxide.
- 8. Horizontal cut that divides the body into upper and lower portions.
- 10. Means front or in front of, also known as ventral.
- 14. Means toward the point of attachment to the body or toward the trunk of the body.
