

Name: _____

Date: _____

Anatomy of the Human Heart

Across

- 2. Has three flaps that open and close, allowing blood to flow from RA to RV
- 6. Receives oxygenated blood from the lungs and pumps it down to LV
- 9. It is the thickest chambers and responsible for pumping oxygenated blood to the tissue all over the body
- 10. Carries blood from the head, neck, arms and chest

Down

- 1. Are blood vessels that transfer freshly oxygenated blood from the Left Atrium

- 3. It separates the LA from the LV; it prevents the blood flowing backward
- 4. It transport deoxygenated blood from the right side of the heart to the lungs for oxygenation
- 5. Carries blood from the lower extremities, abdomen and pelvis
- 7. Is the main Pulmonary Artery
- 8. It is the first chamber to receive deoxygenated blood
- 11. Is the main Artery that carries oxygenated blood to the different parts of our body
