Angle Pair Relationships

Across

- 4. lines that do not intersect
- 8. instrument used to measure angles
- 9. Angles that add up to 90 degrees
- an angle that measures 2 degrees is considered what type of angle
- 12. the common point at which 2 or more angles meet

- 13. 2 or more angles that add up to 180 degrees
- 15. an angle with a measurement of 165 is considered what type of angle
- 16. planes that do not intesect

Down

- 1. a line that measures 180 degrees is what type of angle
- 2. Angles with the same measurement

- 3. a line that divides two lines in half
- 5. a segment that divides the segment into two congruent segments
- 6. two coplanar angles with a common side and vertex
- 7. two angles with the same measurement; sides are opposite rays
- 10. part of a line (one side continues, the other side ends)
- 14. a figure formed with 2 rays with the same endpoint
