# Angle Relationships

## Across

5. A closed figure made up of line segments

9. An angle with a measure greater than 90.

10. Determined by any two points

11. Nonadjacent angles formed by two intersecting lines.

12. Separates an angle or segment into equal parts

13. A pair of adjacent angles whose non common sides are opposite rays.

14. Angles whose measures have a sum of 90 degrees.

## Down

1. Having the same measure

2. Angles whose measures have a sum of 180 degrees.

3. A polygon with all sides and angle congruent

4. Intersecting lines that form 90 degree angles.

6. An angle whose measure is less than 90 degrees

7. Angles that have a common vertex and side but no common interior points.

8. Determined by three non collinear points

15. The point halfway between the endpoints of a segment
