Annelida Crossword

Across

- **1.** In between the circular and longitudinal muscles in the leech
- 4. Class that includes sand worms
- 5. Non-reproductive form
- 8. Grinds food in earthworms
- **9.** A dividing partition between 2 tissues or cavities
- 11. Burrowing or swimming away
- 14. Class that includes earthworms and leeches
- 15. Larval form in plychaeta
- 21. Type of fertilization in Annelida
- 24. Locomotion and adhesion device in leeches
- 25. Modification of segments for jobs, reducing trauma
- 27. Brain for an Earthworm
- 29. What type of circulatory system in annelids
- **31.** Intestinal ridges that increase the surface area of absorption
- 35. Used by earthworms for respiration

- 36. Segments in leeches
- 37. No bristles, in tropical areas
- **38.** Reproductive individual that differs from the non reproductive form
- **39.** Two small sackile glands location on each side of the bladder in males
- **40.** Open ciliated funnel that drives wastes outside

Down

- 2. Excretory organs
- 3. Acts as an earthworms heart to pump blood
- **6.** Type of skeleton where fluid pressure in the coelom provides support and locomotion
- 7. Stores food in earthworms
- **10.** First body segment that contains sensory structures
- 12. Works with gizzard(used to find food)
- 13. Having a body cavity
- 16. A partition between segments

- 17. Ring around the body that makes mucus for reproduction
- **18.** Segmented for flexible support and efficient locomotion
- 19. Subclass of earthworms
- **20.** Functions in movement and gas exchange in sand worms
- 22. Having a mouth and anus with digestive tract
- 23. Development with no larval form
- **26.** Simple organ acting like a kidney to remove cellular metabolic wastes
- 28. Absorbs digested food in an earthworm
- **30.** Bristles on the ventral surface that provide traction
- 32. Subclass that includes leeches
- **33.** Non cellular covering that protects/prevents hydration
- 34. Segmented worm
