

Name: _____

Date: _____

Area and perimeter

Across

4. Special chord that connects two points on the circle and passes through the center.
 6. Distance from one point to another.
 7. The line segment connecting any point on a circle to the center of the circle.
 12. A comparison of two quantities by division.
 13. A parallelogram with four right angles.
 16. A parallelogram with four right angles and four congruent sides.

17. The perpendicular distance between opposite bases.

19. The distance around a polygon.
 20. A quadrilateral with two pairs of opposite sides parallel.

Down

1. Polygon with three sides.
 2. One of the line that make a flat two-dimensional shape.
 3. The non overlapping square units required to dill the region enclosed by the curve.
 5. The distance around the circle or perimeter of the circle.
 8. A quadrilateral with exactly one pair of parallel sides.

9. The ratio of the circumference of any circle to its diameter.

10. An equation that shows a mathematical relationship.

11. A flat surface with no thickness that extends without end in all directions.

14. A line segment connecting two points on a circle but does not need to pass through the center of the circle.

15. The distance from one side to the other side.

18. The bottom side of a figure.
