

Basic anatomy of the eye

Across

5. Person's ability to focus on a certain object for a length of time
 7. Rectus muscle of the eye responsible for inward movement of the eye
 8. A sportsperson's ability to keep his/her eyes on the ball regardless of the speed at which the object moves
 9. Rectus muscle of the eye responsible for lateral downward diagonal movement of the eye
 14. Ability to see clearly
 16. Condition where the cornea is curved unevenly like a football

18. Coordination associated with the ability to use two eyes together
 19. What vision refers to the effectivity of eye movement?
 20. What receptors convert light energy into nerve impulse for the brain?

Down

1. Condition of a person that is near sighted
 2. What test is used to evaluate far-point vision?
 3. Near or far estimation of an object that is not
 4. Condition of a person that is far sighted

6. Person's ability to remember what they have seen when the image has been removed
 10. What is 20/20 vision?
 11. Rectus muscle of the eye responsible for lateral upward diagonal movement of the eye
 12. Near or far estimation of a objects that is moving
 13. Rectus muscle of the eye responsible for outward movement of the eye
 15. What is the accommodation called where a person is required to focus on an object that is near his face or moving towards his face?
 17. Stimulus for eye movement
