# Bio tier 2

## Across

5. The preserves remains or traces of an organism that lived in the past

10. structures in different species that are similar because of common ancestry

12. Breeding organisms with specific traits in order to produce offspring with identical traits

13. random change in allele frequencies that occurs in small populations

14. the ability of a trait to be passed down from one generation to the next

15. A group of individuals that belong to the same species and live in the same area

## Down

1. Are little or no importance to an organism but remains from an ancestor

2. A trait that helps an organism survive and reproduce

3. similar structure without having common ancestry

4. A group of similar organisms that can breed and produce fertile offspring.

6. The gradual change in a species over time.

7. A natural process resulting in the evolution of organisms best adapted to the environment

8. exchange of genes between populations

9. Ability of an organism to survive and reproduce in its environment

11. Any difference between individuals of the same species
