

Bioenergetics Y8

Across

2. Which type of respiration release the most energy?
6. Where in the cell does photosynthesis take place?
7. Where does aerobic respiration take place in the cell?
9. What type of cell is where photosynthesis takes place?
10. What gas is needed for aerobic respiration?
11. What organ in the plant does photosynthesis take place?

Down

1. What is produced in humans during anaerobic respiration?
3. What gas is needed for photosynthesis?
4. What substance gives plant their green colour and is also where photosynthesis takes place?
5. Where to plants get their energy for photosynthesis from?
8. What is the sugar produced in photosynthesis and is required for respiration?
