

Name: _____

Date: _____

Biogeochemical Cycles

Across

2. Is the process in which cloud let water go as rainfall.

4. It is where condensation occur.

8. Nitrogen that is used by plants in the form of _____.

11. It is where phosphorus cycle start.

12. How many steps are there in water cycle?

13. The processes that remove carbon from the atmosphere.

14. Water is made up of Hydrogen and _____?

15. Is the process of liquid water change into ice.

Down

1. It is where plants convert sun light to sugar.

3. The process of water vapor changes into liquid water,

5. Is highly reactive and highly toxic element.

6. H 2 O

7. Chemical element with a symbol of N and atomic num. 7.

9. It is where plants, trees, and fossil fuels are burned.

10. Is a part of carbon cycle where plants and animals die.
