

Name: _____

Date: _____

Biology Prep

Across

2. the organ that makes saliva, first chemical digestion stage
 6. a muscular sac attached to the liver that secretes bile and stores it until needed for digestion
 8. From a higher to a lower concentration, through a semi permeable membrane.
 12. Water is absorbed in this organ
 14. a substance produced by the liver that breaks up lipids into emulsified fat

15. Large organ just above the stomach that produces bile
 16. the removal of nonsoluble waste materials

Down

1. Contraction and relaxation of the muscles of which push the contents of the intestine forward.
 3. where most of the end absorption of food takes place
 4. the process of absorbing nutrients into the body after digestion

5. An enzyme which breaks down proteins
 7. enzyme in saliva that breaks the chemical bonds in starches
 9. waste matter remaining after food has been digested
 10. an enzyme that breaks down emulsified fat into fatty acids and glycerol.
 11. the organic process by which food is broken down into molecules and absorbed into the body
 13. is It is a simple sugar that provides the body with its primary source of energy.
