

Biology Vocabulary Words

Across

- 4. the set of observable characteristics
- 8. set of genes in our DNA which is responsible for a particular trait
- 10. A form of dominance
- 11. a diagram that is used to predict an outcome
- 12. An allele or a gene that is expressed in an organism's phenotype

- 14. the genetic information passing for traits from parents to their offspring
- 15. The study of heredity
- 16. An ancestral line or chart depicting the lineage or descent of an individual
- 17. gene or allele is one in which the effect is not tangible

Down

- 1. A genetic cross between parents that differ in the alleles
- 2. a form of intermediate inheritance

- 3. having identical alleles for a single trait
- 5. A trait genetically determined by an allele
- 6. A trait that is controlled by a group of nonallelic genes
- 7. a pair of genes where one is dominant and one is recessive
- 9. the parents will also pass down a specific phenotypic trait
- 13. one of the possible forms of a gene
