

Biology Vocabulary

Across

5. A hairlike structure that occurs on the surface of certain cells in large numbers is?

7. Cell that has a nucleus and other membrane-bound organelles?

11. Organelle that specializes in ATP formations?

13. Where adjoining cells interact chemically, physically or both it is a?

14. All cell parts, particles, and semi-fluid substances between the plasma membrane and the nucleus is?

16. When one species lives inside another?

17. A structure that encloses the plasma membrane and helps retain its shape?

19. The main organelle of inter-cellular digestion?

20. What is a Cytoskeletal element consisting of actin sub units?

21. Has ribosomes attached and is involved in protein and lipid synthesis?

Down

1. The theory that all organisms consist of 1 or more cells is?

2. What is the organelle that physically separates DNA from the cytoplasm in a Eukaryotic cell?

3. All DNA molecules and their associated proteins in a nucleus?

4. A motile structure of many living endoskeletons is a?

6. An interconnected system of protein that moves a cell and its molecule?

8. Fluid filled storage organelle of a plant cell?

9. Singled celled organism that lacks a nucleus and the profusion of other membrane-bound organelle observed in eukaryotic cells?

10. The structural and functional boundary between the cytoplasm and fluid surrounding the cell is?

12. This is Near the nucleus in animal cells involving cell division?

15. Lipid with a glycerol backbone, 2 fatty acid tails, and a hydrophilic head of 2 polar groups?

18. The structure in which RNA is translated into peptide chains?
