

# Building a Planter

## Across

2. Before securing the post to the 4 foot board, help prevent the wood from splitting by \_\_\_\_\_ three evenly spaced holes in the board with the 5/32 inch drill bit.

6. place a 16 inch 4 by 4 corner post upright and \_\_\_\_\_ with the end of the board.

8. set a 4 foot 2 by 12 board on its narrow side edge on the \_\_\_\_\_; at one end of the board

9. Now that you've got the previous step's post adding technique down, \_\_\_\_\_ that technique to attach a corner post to the other end of the 4 foot board.

12. Four 16-inch-long 4-by-4s to act as \_\_\_\_\_ posts

## Down

1. Two 4-foot-long 2-by-12s for bed \_\_\_\_\_.

3. Two 8-foot-long 2-by-12s for bed \_\_\_\_\_.

4. You will build the frame upside down, working on a \_\_\_\_\_ surface.

5. Then \_\_\_\_\_ the remaining 4 foot board and attach a corner post to each end.

7. Before securing the post to the 4 foot board, help prevent the wood from \_\_\_\_\_ by predrilling three evenly spaced holes in the board with the 5/32 inch drill bit.

10. Then secure the board to the post with three 3 1/2 inch \_\_\_\_\_.

11. Twenty-four 3 1/2-inch #14 \_\_\_\_\_ screws
