

# CELLS

## Across

2. jelly like that protects organelles
3. packs and gives protein to cell
9. a small region near the nucleus in the cell
12. site of lipid production
13. gives protein from ER to golgi body

16. moves materials in and out of cell

## Down

1. this is where mitochondria gets glucose to produce energy
4. helps organelles move through the cell
5. controls cell activities (DNA)
6. produces energy that comes from glucose to this

7. gives protein production to cell

8. small organelle seen the nucleus in the cytoplasm
10. breaks materials for cell to then reuse
11. it has water, nutrients, and waste
14. produces protein
15. protects the plant cell
