# Cardiovascular System

## Across

5. The lower chambers on the left and right chambers of the heart.

8. The blunt point at the bottom of the heart.

9. A large vein carrying deoxygenated blood into the heart.

10. A vein carrying oxygenated blood from the lungs to the left atrium of the heart.

11. The muscular wall that divides the left and right sides of the heart.

12. Refers to the blood and its role in carrying gases and nutrients around the body.

## Down

1. A complex transport system that is responsible for supplying oxygen to the tissues of the body and removing waste products.

2. The portion of the cardiovascular system that carries oxygen-depleted blood from the heart to the lungs and returns oxygenated blood to the heart.

3. Specialised, voluntary muscle tissue that is found in the heart.

4. The space between two consecutive ribs.

6. A pliable sheet of tissue that surrounds the heart and other organs of the body.

7. This is the largest artery in the body. It begins at the top of the left ventricle, the heart's muscular pumping chamber.
