# Cells & Organelles

## Across

2. Where respiration takes place

7. Stores water, food, and waste

8. Found in nucleus and produces ribosomes

11. Makes proteins, make amino acids

12. Runs the cell, contains DNA, and controls the functions of the cell

13. Receives, packages, and distributed proteins

## Down

1. Passage ways that carry proteins

3. Gets energy from sunlight and uses it to produce food

4. Gel-like substance organelles float inside

5. What organelle is selectively permeable

6. Provides structural support and protection

9. Digestive Enzymes

10. Tiny strands inside the nucleus that contains the ribosomes for directing the cell functions
