

# Cell Organelles

## Across

**3.** large in plants and fill with water and solutes

**4.** Site of photosynthesis- has a double membrane

**6.** Contains enzymes; used for intracellular digestion and apoptosis

**8.** Site of Cell Respiration - has a double membrane

**11.** water based solution in which organelles, proteins, and other cell structures float

**12.** Holds Dna

## Down

**1.** makes cellular products like hormones and lipids

**2.** separates the interior of all cells from the outside environment

**5.** packaging in membrane and signals for export

**7.** Has ribosomes for protein synthesis on its surface

**9.** gives structure in plants.

**10.** site of translation- protein synthesis
