# Cell Organelles

**Across**

- 1. packages proteins for transport out of the cell
- 2. What is the organelle that manages or controls all the cell functions in a eukaryotic cell?
- 5. collection of dna in the nucleus of eukaryotic cells
- 11. What digests excess or worn-out cell parts, food particles and invading viruses or bacteria?
- 12. the firm protective structure that gives the cell its shape in plants

- 14. consists of hollow tubes which provides support for the cell
- 15. small hair-like structures
- 16. What is the sites of protein synthesis?
- 17. the membrane surrounding the cell
- 18. What transports materials within the cell?

**Down**

- 3. produces lipids
- 4. What is the jelly-like substance in the cell?

- 6. produces a usable form of energy for the cell
- 7. site where ribosomes are made
- 8. What organelle is closely stacked and in flattened sacs for plants only?
- 9. What part of a cell stores material within the cell?
- 10. What contains chlorophyll which traps energy from sunlight and gives plants their green color?
- 13. long whip-like structures
