

Name: _____

Cell Parts

Across

4. Stores food, water, metabolic and toxic waste
6. Long whip like tail used for locomotion
7. Breaks down larger food molecules into smaller molecules
8. Regulates what enters and exits the cell
9. Moves organelles within cell tubes for transportation
10. DNA and protein tightly packed together

Down

1. Clear jelly like material that supports and protects cell organelles
2. Inside the nucleus. It disappears when the cell divides
3. Made of microtubules and microfilaments
5. Small hair like projections used for locomotion

Word Bank

Chromatin	Lysosomes	Cytoskeleton	Nucleolus
Vacuole	Cytoplasm	Microtubules	Flagella
Cell membrane	Cilia
