# Cell Project

## Across

- 1. Site of photosynthesis, contains chlorophyll
- 4. Channel in cytoplasm used for transport
- 8. Makes ribosomes
- 10. Aids in cell division in animal cells
- 12. Contains digestive enzymes for breaking down worn out cell parts

- 13. Controls what enters and exits the cell

## Down

- 2. It processes and generates molecules for proper cell function
- 3. Stores nutrients, water and waste materials
- 5. Controls all cell activities and contains DNA

- 6. Site of cellular respiration

- 7. Gel like material that holds in organelles
- 9. Site of protein synthesis
- 11. Provides structure and support for a plant cell

## Word Bank

Chloroplast  
Mitochondria  
Ribosome  
Cytoplasm

Lysosome  
Endoplasmic Reticulum  
Nucleus

Vacuole  
Golgi Apparatus  
Cell Wall

Centrioles  
Cell Membrane  
Nucleosis
