# Cell Structure Crossword :) !!

## Across

- 2.** organelles that occur in pairs and are important for cell division  
**5.** control center of the cell that contain coded directions for the production of proteins and cell division  
**6.** a flatten stack of tubular membranes that modifies proteins and packages them for distribution outside the cell  
**7.** a highly folded membrane that is the site of protein synthesis

- 8.** an inflexible barrier that provides support and protects the plant cell  
**9.** organelle that is the protein synthesis  
**11.** a framework for the cell within the cytoplasm  
**12.** projections that aid in locomotion and feeding  
**13.** a membrane-bound organelle that makes energy available to the rest of the cell

## Down

- 1.** a flexible boundary that controls the movement of substances in and out of the cell  
**3.** a vesicle that contains digestive enzymes for the breakdown of excess or wore-out cellular substances  
**4.** a double-membrane organelle with thylakoids containing chlorophyll where photosynthesis takes place  
**10.** projections from cell surfaces that aid in locomotion and feeding; also used to sweep substances along surfaces
