

Name: _____

Date: _____

Cell Structures

Across

- 1. make and release energy when needed in the cell
- 3. green organelles in plant cell
- 6. scaffolding structure within each cell for support
- 8. found in every nucleus that determine genetic makeup of cell

10. what ribosomes make

- 11. storage/transport sacks in a cell
- 12. heartbeat of any cell
- 13. folded membranes that contain ribosomes for the manufacturing of proteins
- 14. green pigment that gives trees, leaves their green color

Down

- 2. dense center portion of a nucleus
- 4. flattened membranes that transport proteins and other substances into and out of a cell
- 5. Protective covering around outside of cell
- 7. jellylike matrix inside each cell
- 9. organelle found only in plant cell
