

Cell organelles

Across

- 4. Packages materials sent from the ER and sends them to other parts of the cell
- 7. No chloroplast or cell wall
- 9. Factories that produce proteins
- 11. Stores food or waste for the cell
- 13. surrounds the cell parts, the cell parts swim in this goo.

14. Cells that look different because they have different jobs

Down

- 1. Cell that has a cell wall, cell membrane, DNA but no nucleus
- 2. Transports proteins and other materials around the cell
- 3. Converts food into energy

- 5. Site for photosynthesis - captures sunlight and use it to produce food for the cell
- 6. The control center of the cell
- 8. break down food particles and old cell parts
- 10. Protects and supports the cell
- 12. Controls what goes in and out of the cell
