

Cells

Across

- 5. Gets rid of waste for the cell.
- 8. A membrane covered structure that holds all the materials needed for life.
- 10. Series of chemical reactions that transforms energy in food molecules to usable energy.
- 11. A group of cells working together

- 12. Organs that work together.
 - 13. Lacks chloroplasts, cell wall, and central vacuole.
- Down**
- 1. Makes ATP or energy for the cell.
 - 2. Also known as bacteria.
 - 3. Contains a cell wall, chloroplast and large vacuole.

- 4. Strong layer around the cell membrane in plants, algae, fungi, and some bacteria.
- 6. The control center of the cell that controls the cell's DNA
- 7. A group of tissues working together.
- 9. Molecules of usable cellular energy.
