

Name: \_\_\_\_\_

# Cells and Life (2.1)

## Across

- 2. theory of how cells are important to life
- 5. substance that forms by joining many small molecules together
- 8. studied plant cells
- 9. declared cells come from preexisting cells

- 10. long chain on amino acid molecules
- 12. first person to see living things under a microscope

## Down

- 1. discovered and named the cell
- 3. One or more sugar molecules

- 4. macromolecule that forms when a long chain of nucleotides join together
- 6. large molecules that do not dissolve in water
- 7. studied animal cells
- 11. explanation based on scientific knowledge
