## Ch. 14 Vocabulary

## **Across**

- **5.** occurs when organisms attempt to use the same limited ecological resource in the same place at the same time.
- **8.** Relationship in which one organism benefits and the other is neither helped nor harmed
- **11.** Succession that begins in an area with no remnants of an older community
- **12.** Relationships in which one organism lives inside or on another organism and harms it.
- **13.** The movement of individuals of a population and into another population

- **15.** Happens when the population of a species rapidly declines
- **16.** The process by which the structure of a biological community evolves over time

## **Down**

- 1. Any relationship in which two species live closely together
- **2.** Measures the number of organisms in a defined space
- **3.** What occurs when existing communities are not completely destroyed by disturbances
- **4.** How organisms are spread out in an area or volume

- **6.** Occurs when population increases dramatically
- 7. Movement of individuals into a population from another population
- **9.** All of the biotic and abiotic factors in an area where an organism lives.
- **10.** This kind of relationship between species in which both benefit
- 14. The range of physical and biological conditions in which a species lives and the way the species obtains what it needs to survive and reproduce.
