Date: _____

Chapter 10: Two-Dimensional Figures Vocab

Across

2. A polygon with four sides and four angles
 4. A fold line that divides a shape into two parts that are the same size and shape
 5. An exact location in space
 9. A quadrilateral with two pairs of parallel sides, two pairs of sides of equal length and four right angles
 11. A triangle with one right angle
 13. A quadrilateral with two pairs of parallel sides and four sides of equal length
 14. A triangle with one obtuse angle
 16. When a shape can be folded about a line so that its two parts match exactly
 18. Greater than a right angle but less than a straight angle

20. An angle that is less than a right angle

21. A quadrilateral with two pairs of parallel sides, four sides of equal length and four right angles
 22. An angle that forms a line
 23. Lines in a plane that are always the same distance apart

Down

1. An angle that forms a square corner
 3. A quadrilateral with two pairs of parallel sides and two pairs of sides of equal length
 6. Lines in a plane that cross at exactly one point and form four angles
 7. Part of a line between two endpoints
 8. A quadrilateral with one pair of parallel sides

10. Lines in a plane that intersect to form four right angles

12. A straight path of points that continues without end in both directions
 15. Part of a line that has one endpoint and continues without end in one direction
 17. A triangle with three acute angles
 19. Formed by two rays or line segments that have the same endpoint
