# Chapter 1 Vocabulary

Across

2. An angle whose measure is exactly 180 degrees.

3. An angle whose measure is exactly 90 degrees.

4. Cuts a line segment into 2 equal lengths.

7. The distance around a circle.

10. 3.14

12. $a^2+b^2=c^2$

13. Angles that have a commone vertex, common side, and no angle between.

15. Measured in square units.

17. Opposite angles formed by intersecting lines.

18. A flat surface with no thickness.

19. Names a location.

20. An angle whose measure is more than 90 degrees, but less than 180 degrees.

22. Points that share the same plane.

23. A flip.

24. Two angles that add up to 90 degrees.

Down

1. (x,y)

5. Two angles that add up to 180 degrees.

6. The distance around an object.

8. A turn.

9. A flat surface that extends forever.

11. A slide.

14. Points that share the same line.

16. An angle whose measure is less than 90 degrees.

21. Cuts an angle into 2 equal measures.
