# Chapter 48&49

## Across

1. Dental device used to hold a matrix band in place during restoration of a class II cavity
3. Shaping of the cavity walls to aid in retaining the restoration.
9. Matrix system designed to establish a temporary interproximal wall for the restoration of a tooth surface without the use of a retainer.
13. Term commonly used to describe restorative and esthetic dentistry.
14. Pitted area in a tooth caused by decay.

15. Junction of two walls in a cavity preparation.

## Down

2. Basis of a stronger system used to retain and support a tooth restoration.
4. Process of decay removal and tooth design in preparation for restoring a tooth.
5. Clear plastic strip used to provide a temporary interproximal wall for the restoration of an anterior tooth surface.
6. Thin layer of composite resin or porcelain bonded or cemented to a prepared facial surface.

7. Space between the teeth.

8. Internal surface of a cavity preparation.

10. Use of a dental material to restore a tooth or teeth to a functional permanent unit.

11. Foundation that binds or holds the dental material and tooth together during the setting process

12. Wooden or plastic triangular device placed in the embrasure to provide the contour needed when a class II lesion is restored.
