Chapter 4-Pregnancy and Birth

Across

3. Medical doctors who specialize in pregnancy and birth.

6. Term used to describe the developing baby during the fetal period.

11. Babies that weigh less than 5.8 pounds at birth.

13. The cell the results from fertilization between a sperm and an egg.

17. The first mild contractions that begin labor, sometimes weeks before actual labor occurs.

18. Birth procedures that focus on relaxation techniques instead of medication to deal with pain.

19. Delivery of a deceased baby.

20. Natural childbirth method that focuses on relaxation techniques, using a focal point, and an emotional coach.

21. Surgical procedure to remove the baby from the womb.

23. Labor that is hastened by medical intervention rather than occurring naturally.

24. Babies that weigh less than 5.8 pounds at birth

25. Nurses who specialize in pregnancy and birth.

Down

1. When the baby is in an upright than a head-down position through birth.

2. When a fertilized egg begins dividing into cells.

4. When the type of protein in red blood cells do not match between the mother and the baby.

5. When the baby's flow of oxygen is somehow interrupted during the birth process.

7. Term used to describe the developing baby during the embryonic period.

8. The pregnancy stage that extends from conception to the ninth week of pregnancy.

9. Pregnancy stage that extends from the ninth week of pregnancy until birth at the end of the third trimester.

10. The pregnancy stage that extends from conception until about two weeks later when implantation in the uterus occurs.

12. A type of diabetes that occurs only during pregnancy.

14. Infectious illnesses spread primarily through sexual contact.

15. Unexpected dearth for unknown reasons during the first few months of a baby's life.

16. A kind of emotional coach used by some mothers during childbirth.

22. A surgical cut that allows the baby to pass through more easily during delivery.
