Chapter 5

Across

3. A mound or ridge of unsorted sediment deposited by a glacier

7. The grinding away of rock or other surfaces as particles carried away by wind, water, or ice scraped against them

9. A large deposit of sediment that forms where a stream enters a large body of water

11. The laying down or setting of eroded material

12. A pile of angular rocks and sediment from a rock fall

13. A large mass of ice that formed on land and moves slowly across Earth's surface

14. A mixture of various sizes of sediment deposited by a glacier

15. The removal of weathered material from one location to another

Down

1. A pile of wind blown sand

2. A current that flows parallel to the shoreline

4. A crumbly, windblown deposit of silt and clay

5. A broad C-shaped curve in a stream

6. The downhill movement of a large mass of rocks or soil because of the pull of gravity

8. Layered sediment deposited by streams of water that flow from a melting glacier

10. The rapid downhill movement of soil, loose rocks, and boulders
