

Chapter 8 Vocabulary

Across

- 1.** squeezing stress
3. deep, underwater troughs created by one plate subducting under another plate at a convergent plate boundary
8. an extensive area of level or rolling land
10. areas of subsidence and regions with low elevation
11. the equilibrium between continental crust and the denser mantle below

12. a change in the shape of rock caused by stress

13. parallel ridges that form where blocks of crust move up or down along faults

14. where tectonic plates slide horizontally past each other

15. the downward vertical motion of Earth's surface

16. when large regions rise vertically with very little deformation

Down

- 2.** made of layers of rocks that are folded
4. flat regions with high elevations
5. stress that pulls something apart
6. parallel forces acting in opposite directions
7. the upward vertical motion of Earth's surface
9. a curved line of volcanoes that forms parallel to a plate boundary
