# Chapter 9 Section 1 - Matching Words

- |                                                                                                                                                                                                                                   |                                |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------|
| 1. Humans arrived here 55,000 - 60,000 years ago                                                                                                                                                                                  | A. Wallacea                    |
| 2. Time when climate changes caused large areas of northern and southern Australia to again be underwater, leading the Aboriginal people of the area to face a changed landscape                                                  | B. pic                         |
| 3. Reflects the conflicts that occurred after sea levels rose and forced groups on to land inhabited by other groups                                                                                                              | C. Sundaland                   |
| 4. Island created due to rising sea levels, separated from mainland Australia by the Bass Strait, where the Aboriginal people adapted and remain today                                                                            | D. pic                         |
| 5. Scraper tool from Australia, common in Pleistocene and early Holocene                                                                                                                                                          | E. Greater Australia           |
| 6. Bifacial tool from Northwest Australia around 2500 - 1000 BCE                                                                                                                                                                  | F. End of the Pleistocene      |
| 7. Major change in Tasmania in 1800 BCE                                                                                                                                                                                           | G. Tasmanians stop eating fish |
| 8. Changes in foraging caused a change in size and location of territory resulting in the abandonment of this site in Tasmania                                                                                                    | H. Australia                   |
| 9. Rainbow Serpent imagery that began at a time of rising sea levels, at first depicting the pipefish, eventually turning into an imaginary, composite beast                                                                      | I. pic                         |
| 10. Term for massive ancient Southeast Asian landmass, created from lower sea levels during the Pleistocene, which extended the Asian continent                                                                                   | J. pic                         |
| 11. Name for the area that included Australia, New Guinea and Tasmania                                                                                                                                                            | K. pic                         |
| 12. Area, which included the islands of the Philippines and eastern Indonesia (Sulawesi, the Moluccas, and the Lesser Sundas), that never had a land bridge to Asia or Greater Australia, in which migration was done via the sea | L. Tasmania                    |
