

Chemical Reaction Vocab

Across

3. the result of a reaction.
 8. an ion that remains on both sides of the equation.
 11. amount of product obtained.
 12. unbalanced equation.
 13. starting materials of a reaction.
 14. 2 or more substances combine.
 16. one reactant exchanged for another in a reaction.

17. Tells us how many of something. It comes before a compound.

Down

1. Double displacement
 2. occurs between fuel and an oxidizing agent.
 4. when a single compound breaks down.
 5. is a chemical reaction that forms two reactants that can react to form the original reactions.

6. representation of a reaction with symbols and formulas.

7. Chemical equation of an ionic reaction.
 9. Has water as a solvent.
 10. an equation that represents the equation when both sides are equal.
 15. something that speeds up a reaction.
