

# Chemistry of Life

**Across**

- 6. single cell life form
- 7. relation between elements of something such that they fit together
- 10. relating to fields and magnetic fields
- 11. attraction holding atoms together

12. sweet tasting carbohydrates

13. molecule containing large number of atoms

**Down**

- 1. genes or heredity
- 2. a species of atoms having the same number of protons
- 3. take or carry from one place to another

4. two or more atoms associating with chemical bonds

5. polymeric carbohydrates

8. organic compounds

9. the property of matter and radiation that has the capacity to perform work
