

Child Development

Across

- 2.** Relating to hearing.
- 6.** Process that moves the baby out of the mother's body.
- 7.** Substances used to produce immunity from diseases.
- 8.** Condition in which a baby has intense abdominal pain and cries inconsolably.
- 10.** Light, happy, vowel like sound babies use to communicate between six and eight weeks after birth.
- 12.** Condition in which the shaking motion causes an infant's brain to hit the skull repeatedly.

13. Vitamin that reduces the baby's risk for neural tube defects.

14. Development that involves interactions with people and social groups.

17. Being able to use and control the small muscles, especially those in the fingers and hands.

Down

1. Being able to use the large muscles to roll over, sit, crawl, stand, and walk.

3. Prenatal test in which a needle is inserted through the woman's abdomen into the amniotic sac and a sample of the fluid is removed for cell study.

4. Measures couples use to help prevent pregnancy.

5. First level of play where children play alone.

9. Moving by pulling with the arms, but not lifting the abdomen from the floor.

11. Type of play when children are doing the same activity, but not talking or working together.

15. Medical term used to describe an unborn baby in the embryonic stage of development.

16. Period of three months.
