

Name: _____ Date: _____ Period: _____

Circle Vocabulary

Across

5. an angle whose vertex is on a circle and whose sides contain chords of the circle

7. segment that has endpoints on the circle and that passes through the center of the circle; also the length of that segment

9. a way to display data by using a circle divided into non-overlapping sectors

12. region inside a circle bounded by two radius of the circle and their intercepted arc.

14. an angle whose vertex is the center of a circle

15. the distance around the circle

Down

1. coplanar circles with the same center

2. line that is in the same plane as a circle and intersects the circle at exactly one point

3. the center to the edge of the circle

4. ratio of the circumference of a circle to its diameter

6. the point around which a figure is rotated

8. segment whose endpoints lie on a circle

10. region between two concentric circles

11. an arc of a circle whose endpoints lie on a diameter

13. unbroken part of a circle consisting of two points on the circle, called the endpoints, and all the points on the circle between them
