

Coasts- Managing risks and conflicts

Across

3. A disagreement or argument
 8. An embankment which prevents the sea from eroding an area of land.
 9. Prevents erosion but also protects low-lying areas from coastal flooding.
 10. Can prevent longshore movement of sediment and encourages deposition.
 11. Communities forced to abandon their homes due to natural processes.

12. This process involves artificially replenishing the sediment.
 13. Prevents natural processes by using man-made materials.

Down

1. Managing the wider coastal zone from coastal hazards, as well minimising environmental and ecological impacts.
 2. Coasts are divided into natural compartments containing sediment sources, transport paths and sinks.

4. Occurs when erosion gets behind coastal defences, leading to rapid erosion inland.
 5. Prevents mass movement.
 6. It can be used on any waterway or water containment where there is potential for water erosion.
 7. Works with natural processes to reduce coastal erosion and flood threat.
