

Cognitive Approach

Across

2. Which type of group design uses different participants to take part in each experimental condition (they will be allocated randomly)
3. What part of WMM integrates info processed by other subsystems?
5. What part of the WMM stores visual/spatial info?
7. In the WMM what processes auditory information?
10. From which culture did children have a greater digit span?
12. Which memory system gives us the ability to recall events from our lives?

15. Which component of the WMM is considered 'to vague' and least understood?

16. What memory store has a capacity of 5-9 items and a duration of 18-30 seconds

Down

1. What are memories considered to be?
4. Which group design has participants take part in only one experimental condition, but they are recruited specifically to be similar in relevant characteristics
6. Which study was conducted by Sebastian & Hernandez-Gil about digit span?

8. Which psychologist studies the recollection of word lists in relation to their acoustic and semantic (dis)similarity?

9. What type of validity are lab experiments especially low in?

11. Which memory store holds our knowledge of the world?

13. What influences what your memory stores/encodes and retrieves?

14. HM suffered from amnesia and provides evidence for what model of memory?
