

Compounds and Mixtures

Across

3. Substance that the solute is dissolved in
 5. Particles do not dissolve, they settle out eventually
 7. Particles are too large to dissolve
 9. The substance that is being dissolved

10. A solution with large amounts of solute in the solvent
 11. A substance made by combining two or more elements chemically
 12. Contains only one kind of atom

Down

1. When a solution has more solute than it can possibly dissolve

2. One substance dissolved in another
 4. A uniform mixture
 6. A substance made by combining two different materials physically
 8. A solutions with a small amount of solute in the solvent
