

Computer Hardware

Across

- 3. Sits on top of the heat sink and helps cool the processor.
- 4. Anything that will connect to the outside of the computer, they can be input and output, depending on the device.
- 7. Brains of the computer.
- 11. Output device that allows you to produce a paper copy of information contained on the computer.
- 12. Contains all the inner workings of a computer, protects all the components and allows you to hook up peripherals to the system.

- 13. This is where files are permanently stored. (in the video assignment it was compared to the basement)

- 14. Audio output device that allows you to hear sounds.

Down

- 1. This input and output device is used to connect computers to the internet.
- 2. Where you plug in a cord to supply power from the wall outlet to the computer.
- 5. A hand-held device used to move a pointer on the computer screen.

- 6. The physical components, devices, or parts of the computer.
- 8. A visual output device. It can also be input if it is a touchscreen.
- 9. Information is entered into a computer by typing with this input device.
- 10. This is where files are temporarily stored. It is cleaned out every time you turn your computer off. (in the video assignment it was compared to the closet)
