# Construction and Scale Drawings

Across

1. Two angles whose sum measures 90 degrees

5. Gives the ratio that compares the measurements of the two drawing or model with the actual dimension

9. Two angles whose sum measures 80 degrees

10. A quadrilateral with exactly one pair of parallel sides

11. Opposite angles formed by the intersection of two lines

Down

2. Angles with the same measure

3. A proportional, two-dimensional drawing of an object

4. Sides with the same length

6. A scale without units

7. A quadrilateral with two pairs of congruent adjacent sides and opposite sides that are not congruent

8. A proportional, three-dimensional model of an object
